Recommendation / Reference for the SS-01 System

Dear Madams or Sirs,

We have already successfully used the steel plate system SS-01 at our construction sites in the region of Eastern Westphalia / Lippe. The use of this system significantly simplifies the asphalt installation in areas with manholes, improves the asphalt sealing in the areas surrounding the manholes frames and significantly increases the quality of the top of the manhole cover due to the subsequent installation by way of a core drill. It is no longer necessary to adjust the manhole covers to each installed asphalt layer. Additionally, the risk of damage to previously installed parts of the frame which are being driven over with construction machinery or motor vehicles is eliminated.

We are very satisfied with the results and can highly recommend the use of the SS-01 System.

Best regards,

STRABAG AG
